GENERAL INDEX TO VOLUME I.

Africa, Popular Astronomy in—(note) 94
Almanac positions of the Moon (query) 425
Amateurs, Suggestions to—L. Swift.
I. Nebulæ and comet-seeking 30
II. The great nebula in Andromeda 111
III. The great nebula in Orion 157
IV. Other wonderful nebulæ 249
V. Nebulæ and clusters 369
Amateur telescopist's hand-book, F. M. Gibson (book notice) 431
Andromeda, Character of the nebula of—(query) 336
Andromeda, Great nebula in—L. Swift 111
Andromedes of Biela's comet, W. F. Denning 345
Annealing, Testing optical glass for the quality of its—J. A. Brashear 447
Annular eclipse of the Sun, April 5, 1894 (note) 329
Antares, Occultation of—by the Moon (note) 94
Apex of the earth's way, T. J. J. See 373
Arago gold medal for E. E. Barnard (note) 336
Arcturus, D. Kirkwood 248
Armitage F., The need of a free astronomical observatory 273
Asteroids and the Pleiades, Photograph of—H. C. Wilson 322
and their relation to the planetary system, D. Kirkwood 19
discovered in 1893 (note) 179
1893 and 1894 (note) 383
1893, Numeration of—(note) 333
1893 (note) 88
New—1894 AQ, AR, AS (note) 333
Astrology and the signs of the zodiac (query) 425
Astronomical bibliography (note) 432
Observatory, The need of a free—F. Armitage 273
Astronomy, Early history of—(query) 475
in high schools (note) 90
with a small camera, H. C. Wilson 26, 49
Aurora and sunspots of March 30th (note) 430
Concerted observation of—M. A. Veeder 22
March 30th (note) 430
Auroræ, sunspots and earth currents (note) 479
Authority for variable star maxima (note) 429
Barlow's Elementary mathematical astronomy 96

Barnard, E. E., Early life of—S. W. Burnham..... 193
Gegenschein or zodiacal counter glow..... 337
Jupiter's fifth satellite..... 76
Life and work of—S. W. Burnham..... 341
November meteors (note)..... 192
Photographs of Brook's comet (Oct. 17, 1893)..... 145
The Arago gold medal (note)..... 336
Work of—at Lick Observatory. S. W. Burnham..... 441
Berberich, Dr. A., Numeration of asteroids of 1893 (note)..... 333
Bibliography of astronomy for February (note)..... 432
Biela's comet, The Andromedes of—W. F. Denning..... 345
Book notices:
Celestial motions. W. T. Lynn..... 383
Celestial objects for common telescopes. R. T. Webb..... 384
Elementary mathematical astronomy. C. W. C. Barlow..... 96
Elementary meteorology. W. M. Davis..... 480
Remarkable comets, W. T. Lynn..... 383
The amateur telescopist's hand-book, F. M. Gibson..... 431
The dawn of astronomy, J. N. Lockyer..... 429
Total eclipses of the Sun, M. F. Todd..... 432
Bowen, E. A., A lesson on the harvest moon..... 32
Jupiter at opposition, a naked-eye study..... 133
Naked-eye observations of Jupiter (note)..... 240
Visualizing the earth's annual motion..... 178
Brashear, J. A., Comparison of the efficiency of the inner and outer portions of an objective (note)..... 188
Difficulties in securing better eye-pieces (note)..... 188
Glass for telescope objectives.....221, 241
Testing optical glass for the quality of its annealing..... 447
Testing optical glass for striæ..... 291
Brooks' comet (*c* 1893, Oct. 17) (notes).....187, 285
Photographs of—E. E. Barnard..... 145
Brooks, W. R., Comet *a*, 1894 (Denning), (note)..... 423
Burnham, S. W., Double-star measures near H 3950 (note)..... 477
Early life of E. E. Barnard..... 193
E. E. Barnard's work at Lick observatory..... 441
Gold medal for—(note)..... 286
How to find the orbit of a double star by a graphical method.....243, 349
Life and work of E. E. Barnard..... 341
Professor Glasenapp's double-star measures in 1892 (note) 477
Byrd, M. E., First observations of the sun and moon.....216, 252
Motion in the sky (note)..... 476
Questions on the sky (note)..... 92
Care of the telescope, *from Gibson's handbook*..... 412
Celestial motions, a handy book of astronomy (book notice)..... 384
Objects for common telescopes (book notice)..... 384
Phenomena, Time of current—(query)..... 189
Chandler, S. C., Maximum and minimum of R. Leonis (note)..... 473
Chauvenet's practical astronomy, Preparation for the study of—(query)..... 380
Childs, George W., Monument to R. A. Proctor (note)..... 94

Christian, I. E., Meteors and stellar scintillation..... 414
Clusters and nebulæ, L. Swift..... 369
Star—R. Sprague..... 407
Comet, Tempel's second periodic, 1873 II, Ephemeris of—for May and June, (note)..... 422
1889 V, Orbits of—H. C. Wilson, 151; Researches upon—(note)..... 89
Holmes—(1892, III) (note)..... 285
b, 1893, II observed by D. E. Hadden (note), 44; observed by W. E. Sperra (note)..... 44
c, 1893, (Brooks), Oct. 16, (notes), 143, 187, 285; Elements and ephemeris of—for December, 186; Photographs of—E. E. Barnard..... 145
a, 1894, (Denning) (notes), 421, 423, 469; Parabolic elements and ephemeris of—..... 421
b, 1894, (Gale), Discovery of—421; Douglass' observation of—471 Elements and ephemeris of—for May and June, 422; Elements of—470; Ephemeris of—for June and July, 471; Observed by small glass (note), 472; Photographs of—by E E. Barnard (note)..... 472
b, 1894 (Gale), (query)..... 474
family of Jupiter, W. W. Payne.....25, 62
Newton's—J. B. Wood..... 411
notes.....44, 89, 143, 186, 285, 421, 469
seeking, Nebulæ and—suggestions to amateurs, L. Swift..... 30
Tempel's periodic—observed at Cape of Good Hope (note)..... 472
The Andromedes of Biela's—W. F. Denning..... 345
Comets, 1894, H. C. Wilson..... 229
Lynn's Remarkable—(book notice)..... 383
Comet's tail discovered by Holmes (note)..... 421
Comparison stars for variables of long period.....237, 282
Concerted observation of the aurora, M. A. Veeder..... 22
Constellation study, by Winslow Upton, I, introductory, 1; II, 50; III, 115; IV, 257; V, 308; VI, 363; VII, 391; VIII, 449; (note)..... 45
Construction of the spectroscope and the principles involved, J. E. Keeler..... 9
Crew, Henry, Path of a ray of light through a photographic portrait lens (note)..... 189
Crusenberry, W. A., Bright meteor (note)..... 281
Date line—International (note)..... 45
Dawn of astronomy (book notice)..... 429
Davis, W. M., Elementary meteorology (book notice)..... 480
Days, Varying length of—in December and January, (query)..... 425
Denning, W. F., Discovery of comet *a*, 1894 (note)..... 421
Shooting stars, how to observe them and what they teach us:
I. General remarks..... 34
II. Preliminaries of observation..... 67
III. Radiation and radiant points..... 97
IV. The observation of meteor showers, differences among them..... 147
V. Radiation and duration of meteor showers..... 208
VI. The August Perseids..... 267
VII. The shower of Leonids..... 296
VIII. The Andromedes of Biela's comet..... 345
IX. Fireballs..... 438
Description of the 40-foot telescope of the Lick observatory eclipse expedition, J. M. Schaeberle..... 72

Directions in the sky (note)..... 437
Discovery of comet *a*, 1894, Denning (note)..... 421
of a new comet by Mr. Gale (note)..... 421
Distance and parallax of stars (query)..... 381
Distances of the stars, W. W. Payne..... 129
Division of work (note)..... 47
Double-star astronomy (note)..... 46
How to find the orbit of a—by a graphical method, S. W. Burnham 243, 349
measures in 1892, Professor Glassenapp's—S. W. Burnham (note).. 477
measures near H 3950, S. W. Burnham (note)..... 477
Eadie, J. H., Aurora of March 30, (note)..... 430
Early life of E. E. Barnard, S. W. Burnham..... 193
Earth, Changes of axis of—(query)..... 475
Earth's annual motion visualized, E. A. Bowen..... 178
motion visualized, L. Swift (note)..... 240
way, Apex of—T. J. J. See..... 373
Eclipse expedition of Lick Observatory, Description of the 40-foot telescope of the—J. M. Schaeberle..... 72
of the moon, March 21, 1894, A partial—(note)..... 278
of the sun, Annular—April 5, 1894 (note)..... 329
Solar—of April 16, 1893 (query)..... 95
Eclipses for 1894. H. C. Wilson..... 227
Elongations of the satellites of Saturn, Dec. 141, Jan. 185, Feb. 235, March 279, April 331, May 378, June, 418
of the satellites of Uranus.....May 377, June 419, July 468
Ephemeris of the fifth satellite of Jupiter..... 87
Errata.....240, 283, 336
Ether and gravitation, W. H. S. Monck..... 409
Eye-pieces, Difficulties in making better—(query)..... 188
Solid—(note)..... 239
Face of the sky, Charlotte R. Willard, Sept. 38, Oct. 83, Nov., Dec. 137, Jan. 180, Feb. 226.
Faith in the integrity of the interstellar medium, De V. Wood..... 224
Fifth satellite of Jupiter, E. E. Barnard..... 76
Ephemeris of—Oct. and Nov..... 87
Fireballs, W. F. Denning..... 438
First observations of the sun and moon, M. E. Byrd.....216, 252
Fixed stars, W. H. S. Monck.....I, 195, II, 300, III, 385
Fleming, M., Two new variable stars..... 324
Gale's Comet, See Comet *b* 1894.
Gale, Discovery of comet by—(note)..... 421
Gegenschein or zodiacal counter glow, E. E. Barnard..... 337
General notes.....45, 90, 144, 191, 239, 285, 336, 382, 428, 476
Gibson, F. M. The amateur telescopist's handbook (book notice)..... 431
Gilman, D. C. Jupiter's Satellites in 1664, (note)..... 288
Glass for optical instruments, with special reference to telescope objectives, J. A. Brashear.....221, 241, 291
Glassenapp's double-star measures in 1892 (note)..... 477
Gold medal for S. W. Burnham, (note)..... 286

Goodsell observatory lantern slides (query)..... 425
Latitude and longitude of—(query)..... 189
When founded (query)..... 284
Gravitation and the ether, W. H. S. Monck..... 409
Great nebula in Orion, H. C. Wilson..... 433
Hadden, D. E., Meteors (note)..... 89
Observations of Comet *b* 1893 (note)..... 44
Small telescope with spectroscope (note)..... 478
Hale, George E. (note)..... 47
Harmon, O. E., A lesson in parallax..... 403
Harpham F. E., Gale's comet (note)..... 472
Hart, W. B., concerning query 4 (note)..... 238
Harvest moon, A lesson on—E. A. Bowen..... 32
Heavenly bodies, D. Kirkwood..... 205
Holmes' comet, 1892, III (note)..... 285
Holmes, Discovery of comet's tail by—(note)..... 421
How to find the orbit of a double star by a graphical method. S. W. Burnham..... 243, 349
International date line (note)..... 45
Interstellar medium, Faith in the integrity of—De. V. Wood..... 224
Jena discs (note)..... 285
Jupiter at opposition, a naked-eye study, E. A. Bowen..... 133
Naked-eye observations of (note)..... 240
Jupiter's family of comets, W. W. Payne..... 25, 62
fifth satellite, E. E. Barnard..... 76
great red spot, time of crossing central meridian, Nov. and Dec., 141; Jan., 182; Feb., 236; March, 275; April..... 326
satellites in 1664 (note)..... 288
satellites, Phenomena of—Sept. and Oct. 42, Nov. 86, Dec. 140, Jan. 183, Feb. 234, 235, March 276, April 327.
Keeler, J. E., Size of prism for spectroscope with ¾-inch lenses (note)..... 285
The spectroscope and some of its applications.
I. Principles involved in the construction of the instrument... 9
II. The wave-length scale and the solar spectrum..... 102
III. Practical details relating to the adjustment and use of the instrument..... 169, 200
Kirkwood, D., W. W. Payne..... 167
Arcturus..... 248
The asteroids and their relation to the planetary system..... 19
The heavenly bodies..... 205
Klumpke, Miss D. (note)..... 336
Kruetz's Elements of comet *b* 1894, (Gale)..... 422
Lantern slides from Goodsell Observatory (query)..... 425
Leonid shower, W. F. Denning..... 296
Lesson in parallax, O. E. Harmon..... 403
Lesson on the harvest moon, E. A. Bowen..... 32
Lick Observatory, E. E. Barnard's work at—S. W. Burnham..... 441
telescope, Powers and work of—(query)..... 424
Life and work of E. E. Barnard, S. W. Burnham..... 341
Longitude on the Sun, Determination of—(query)..... 284
Magnifying power for star observations (query)..... 334

Mars, Snow on—(query) 283
surface, Temperature of—(query) 283
Martin, E. S. Observatory for amateurs (note) 93
Occultation of Antares (note) 94
Remarkable sunspot (note) 91
Maxima and minima of variable stars, April, 333; May, 378; June, 419; July and August 469
Maximum and minimum of R. Leonis, (query) 473
Medal for E. E. Barnard, Arago gold—(note) 336
Gold—for S. W. Burnham (note) 286
Mercury, Transit of—for 1894 (note) 227
visible to the naked-eye in February 1894 (query) 380
Meteor in day time (note) 192
notes 89, 192, 281, 374
showers, The observation of—differences among them, W. F. Denning .. 147
Meteors and stellar scintillation, I. E. Christian 414
November—(notes) 129
Minima and maxima of variable stars—Aprii 333; May 378; June 419; July and August 469
Minima of variable stars of the Algol type, Sept. and Oct., 41; Nov., 88; Dec. 142; Jan., 185; Feb., 236; March, 280; April, 332; May 379; June, 420; July and August 468
Minimum and maximum of R. Leonis (query) 473
Minor planets (note) 383
Mira Ceti (note) 431
Monck, W. H. S., The ether and gravitation 409
The fixed stars ..... I. 195; II, 300; III, 385
Moon, W. W. Payne ..... I, 16; II, 289
Almanac positions of—(query) 425
and Sun, first observations of—M. E. Byrd 216, 258
A partial eclipse of—March 21, 1894, (note) 272
Phases and aspects of—Sept. and Oct., 43; Nov., 87; Dec., 139; Jan., 182; Feb., 233; March, 275; April, 326; May, 377; June, 420; July and Aug. 467
photographs, Poor definition of—(query) 239
Study of the—(note) 45
Motion in the sky (note) 476
Mt. Blanc Observatory (note) 226
Mt. Lowe Observatory (note) 430
Naked-eye observations of Jupiter (note) 240
sunspot (note) 144
Nebula in Andromeda, Character of—(query) 336
in Orion, L. Swift 157
in Orion, The great—H. C. Wilson 433
Nebulæ and clusters, L. Swift 369
and comet-seeking, suggestions to amateurs, L. Swift 30
other wonderful—suggestions to amateurs, L. Swift 249
Need of a free astronomical observatory, F. Armitage 273
Newton's comet, J. B. Wood 411
Objective, Comparison of the efficiency of the inner and outer portions of—(queries) 188, 238
Objectives, Glass for—J. A. Brashear 221, 241, 291

Observations of meteor showers, differences among them, W. F. Denning..... 147
of the aurora, M. A. Veeder..... 22
of the Sun and Moon, M. E. Byrd.....216, 252
Observatories, Heating large—(query)..... 381
Observatory for amateurs (note)..... 93
for Boston, A public—(note)..... 287
Mt. Lowe—(note)..... 430
on Mt. Blanc (note)..... 226
Occultation of Antares by the Moon (note)..... 94
Occultations for 1894..... 227
visible at Washington, Sept. and Oct., 43; Nov., 85; Dec., 143; Jan., 184; Feb, 233; March, 279; April, 333; June, 417; July and Aug.. 467
Opposition, Jupiter at—a naked eye study, E. A. Bowen..... 133
Optical glass, J. A. Brashear.....221, 241, 291
Note..... 239
Orbit of a double star by a graphical method, How to find—S. W. Burnham 243, 349
Orbits of comet 1889 V, H. C. Wilson..... 151
Orion, The great nebula in—H. C. Wilson..... 433
Parallax, A lesson in—O. E. Harmon..... 403
Parallax and distance of the stars (query)..... 381
Parkhurst, J. A., Variable stars, I, 125; II, 161; III, 212; IV, 263; V, 315; VI, 358; VII, 397; VIII..... 460
Suspected variable near ν Scorpii (note)..... 477
Variable star observers (note)..... 236
Payne, W. W., Daniel Kirkwood..... 167
High magnifying power (note)..... 334
Jupiter's comet family.....25, 62
The distances of the stars..... 129
The Moon.....16, 289
The Pleiades..... 456
Yerkes telescope..... 176
Peculiar phenomena (note)..... 191
Periodic comet 1873, Tempel's second, ephemeris for May and June..... 422
observed by Finlay at Cape of Good Hope (note)..... 472
Perseids, The August—W. F. Denning..... 267
Personal sketches (notes)..... 47
Peters-Borst star catalogue (note)..... 428
Phases and aspects of the Moon, Sept. and Oct., 43; Nov., 87; Dec., 139; Jan., 182; Feb., 233; March, 275; April 326; May 377; June 420; July and Aug..... 467
Phenomena not dependent on longitude (query)..... 188
of Jupiter's satellites, Sept. and Oct., 42; Nov., 86; Dec., 140; Jan. 183; Feb., 234, 235; March, 276; April..... 327
Photograph of the Pleiades and two asteroids, H. C. Wilson..... 322
Photographic camera for Goodsell Observatory (note)..... 191
plate, Non-halation—(query)..... 474
portrait lens, Path of ray of light through—(query)..... 189
Photographs of Brooks' comet (Oct. 17, 1893), E. E. Barnard..... 145
of the moon, Poor definition in—(query)..... 239
Photography with camera and visual telescope (query)..... 284

Planet notes and tables by H. C. Wilson: Sept. and Oct., 39; Nov., 84; Dec. 138; Jan., 181; Feb., 232; March, 274; April, 324; May, 375; June, 416; July, and Aug 465
Planetary system, The asteroids and their relation to—D. Kirkwood 19
Planets 1894 228
Pleiades, W. W. Payne 456
and two asteroids, Photograph of—H. C. Wilson 322
Catalogue of—(query) 476
Polaris, observed with small telescope (query) 335
Popular Astronomy in Africa (note) 94
Porter, J. G., Elements and ephemeris of comet *c* 1893 for Dec. 186
Poole Brothers' Celestial handbook (note) 48
Star charts (note) 429
Practical suggestions and queries 95, 188, 238, 283, 334, 380, 424, 473
Proctor, Mary, lecturer, (note) 90
Richard A., C. E. Willard 319; monument (note) 94
Public Observatory for Boston (note) 287
Publisher's notices 48, 96, 288, 336, 384, 432, 480
Queries pertaining to astronomical themes:
1. Solar eclipse of April 16, 1893 95
2. Times of rising and setting of heavenly bodies 188
3. Phenomena not dependent on longitude of place 188
4. Comparison of efficiency of inner and outer portions of a small objective (see also query 10) 188
5. Difficulties in the way of better eye-pieces 188
6. Faint star near Tycho's Nova 189
7. Latitude and longitude of Goodsell Observatory 189
8. Time of current celestial phenomena 189
9. Path of ray through a photographic portrait lens 189
10. See query 4 238
11. Same as query 4 .....
12. Poor definition in lunar photographs 239
13. Snow on Mars 283
14. Temperature of Mars' surface 283
15. Date of founding Goodsell Observatory 284
16. Maximum brilliancy of Venus 284
17. Numerical measure of Venus' light 284
18. Celestial photography with camera and visual telescope 284
19. Determination of longitude on the Sun 284
20. Test objects for a 4-inch glass 285
21. Size of prism for a spectroscope with ¾-inch lenses 285
22. High magnifying power for star observations 334
23. Illumination of star image a function of the object-glass (see No. 22) 335
24. Observing Polaris with small telescope 335
25. Character of the nebula of Andromeda 336
26. Preparation for the study of Chauvenet's practical astronomy 380
27. Mercury visible in February, 1894 380
28. Small telescope for beginners 380
29. Heating large observatories 381
30. Same eyepieces on different telescopes 381
31. Objectives in sections 381

32. Parallax and distance of stars..... 381
33. Inclination of Sun's axis and how determined..... 381
34. Powers and work of the Lick telescope..... 424
35. Yerkes telescope..... 424
36. Heliacal rising of the stars..... 424
37. Almanac positions of the Moon..... 425
38. Astrology and the signs of the zodiac..... 425
39. Direction of the Sun's rotation..... 425
40. Six-inch telescope and shadows of Saturn's satellites..... 425
41. Lantern slides from Goodsell Observatory..... 425
42. Varying length of days in December and January..... 425
43. Velocity of the axial rotation of the stars..... 426
44. Minimum and maximum of R. Leonis..... 473
45. Change of variable stars..... 473
46. Time of rising and setting of heavenly bodies dependent on observer's latitude and longitude..... 473
47. Gale's comet..... 474
48. Legend pertaining to the stars in Virgo..... 474
49. Non-halation plates..... 474
50. Changes of the axis of the Earth..... 475
51. Finding stars by the aid of circles..... 475
52. Early history of astronomy..... 475
53. Catalogue of the Pleiades..... 476
54. Construction and use of a small telescope..... 476

Questions on the sky, M. E. Byrd (note)..... 92
Range of telescopic power (note)..... 91
Red spot of Jupiter, Time of crossing the central meridian, Nov. and Dec., 141; Jan., 182; Feb., 236; March, 275; April..... 326
Remarkable sun-spot (note)..... 91
Researches on comet 1889 V..... 89
Rising and setting of heavenly bodies dependent on observer's latitude (query)..... 473
Times of—(query)..... 188
Rotation of the Sun, Direction of—(query)..... 425

V. Radiation and duration of meteor showers..... 208

VI. The August Perseids..... 267
VII. The shower of Leonids..... 296
VIII. The Andromedes of Biela's Comet..... 345
IX. Fireballs..... 438
note..... 46
Sky, Questions on the—(note)..... 92
Solar spectrum and the wave-length scale, J. E. Keeler..... 102
Solid eye-piece (note)..... 239
Spectroscope and some of its applications, J. E. Keeler:
I. Principles involved in the construction of the instrument..... 9
II. Wave-length scale and the solar spectrum..... 102
III. Practical details relating to the adjustment and use of the instrument.....169, 200
Spectroscope and some of its applications (note)..... 45
Small telescope with—(note)..... 478
with ¾-inch lenses, Size of prism for—(query)..... 285
Sperra, W. E., Observation of comet *b*, 1893..... 44
Sprague, R., Star clusters..... 407
Star catalogue, The Peters-Borst—(note)..... 428
Star charts, The Poole—(note)..... 429
observations, Magnifying power for—(query)..... 334
clusters, R. Sprague..... 407
Stars, Heliacal rising of—(query)..... 424
The fixed—W. H. S. Monck.....I, 195; II, 300; III, 385
Velocity of the axial rotation of—(query)..... 426
Stellar scintillation and meteors, I. E. Christian..... 414
Study of the Moon (note)..... 45
Suggestions to amateurs, by Lewis Swift, (see amateurs).
Sun and Moon, First observations of—M. E. Byrd.....216, 252
Annular eclipse of—April 5, 1894 (note)..... 329
The determination of longitude on—(query)..... 284
Sun's axis, Inclination of—and how determined (query)..... 381
rotation, Direction of—(query)..... 425
Sunspots and aurora of March 30 (note)..... 430
auroræ and Earth currents (note)..... 479
Naked-eye—(notes).....144, 382
Remarkable—(note).....91, 287
Suspected variable near ν Scorpii (note)..... 477
Swift, L., Mt. Lowe Observatory (note)..... 430
(note)..... 47
Suggestions to amateurs:
I. Nebulæ and comet-seeking..... 30
II. The great nebula in Andromeda..... 111
III. The great nebula in Orion..... 157
IV. Other wonderful nebulæ..... 249
V. Nebulæ and clusters..... 369
Visualizing the Earth's motion (note)..... 240
Telescope, Construction and use of small—(query)..... 476
for beginners (query)..... 380
Powers and work of the Lick—(query)..... 424
objectives, Glass for—J. A. Brashear.....221, 241, 291
objectives in sections (query)..... 381

Telescope, Small—with spectroscope (note) 478
Test objects for a 4-inch—(query) 285
The care of the—*from Gibson's hand-book* 412
What a 5-inch—will show, G. P. Serviss 372
Yerkes—W. W. Payne 176
Yerkes—(query) 424
Telescopes, Making and care of—(note) 46
Same eye-pieces on different—(query) 381
Test objects for small— 281
Telescopic power, Range of—(note) 91
Tempel's periodic comet observed by Finlay, at Cape of Good Hope (note) ... 472
second periodic comet, (1873 II), Ephemeris of—for May and June .. 422
Test objects for a 4-inch glass, (query) 285
for small telescopes 281
Testing optical glass for striæ, J. A. Brashear 291
for the quality of its annealing, J. A. Brashear 447
Time and time-signals, C. R. Willard 60
Todd, Mabel L., Total eclipses of the Sun (book notice) 432
Total eclipses of the Sun, by M. L. Todd (book notice) 432
Transit of Mercury, 1894 227
